

Capstone Agent Reflection

The agent's genuine value is the generate -> critique -> repair loop.

It makes acceptance-criterion coverage, business-rule coverage and required-message checks machine-verifiable and repeatable.

Manual QA remains valuable for ambiguous requirements and product context.

The agent is strongest when requirements scale or change frequently.

Upgraded run: 36 login cases + 48 promo cases = 84 cases.

Both features required two iterations and finished with zero coverage gaps.
